Taylor Steel, Inc. Installs a Red Bud Industries Stretcher Leveler

RED BUD, Illinois (April 3, 2024) – Taylor Steel, Inc. recently installed a Red Bud Industries .625” (16 mm) x 75” (1905mm) x 40’ (12 m) **Stretcher Leveler** for their Stoney Creek, Ontario, Canada. location. This project is part of a significant upgrade in leveling capability. The Stretcher Leveler’s SUREGRIP® technology features a direct clamp design with long lasting metallic gripper pads to avoid slipping while also avoiding the use of any consumable products during operation. The Quick Draw feature produces the shortest cycle time of any Stretcher Leveler on the market, which is critical to throughput.

The new Stretcher Leveler will produce the flattest, most stable material possible despite incoming shape defects. The result is a flat product that will stay flat making it particularly well suited for laser cutting applications.

Included is also a **Rotating Brush Dust Collector** and **Vacuum System** that will further enhance the quality of finished parts. Non-marking upper and lower brushes will rotate up to 1000 rpm, while high velocity vacuum heads collect the debris that is removed from the material.

The SUREGRIP trademark is registered with the U.S. Patent and Trademark Office.
